Sampling of settled dust

Dust sampling
(Fresh and old dust)

Analysis of Elements
by ICP-AES and AAS

Analysis of biocides
by GC/MS

Air sampling of VOC/SVOC

VDI 4300-6

6 - 10 l air volume

Flec- Pump

Tenax TA-Tube

Analysis by TDS-GC/MS

Wipe samples

Extracted paper towel
Soxhlet- Extraktion
Analysis by GC/MS

Conclusions

- It was demonstrated that storage and exhibition rooms, diorama and display cases of museums might be contaminated with numerous biocides.
- This situation provides a possible health risk of museum staff.
- We are convinced that our results do not represent isolated cases and that similar scenarios can be found in other institutions.
- Museums should be aware of these findings in order to protect employees and visitors.
